Address:			DEA:	NPI:	
City:	State:	Zip:	City:	State:	Zip:
Phone:	Allergies:		Phone:	Fax:	

DESCRIPTION OF MEDICATION USE

Buprenorphine lozenges are used for managing moderate to severe pain and opioid dependence by acting as a partial opioid agonist, binding to opioid receptors to reduce cravings and withdrawal symptoms. They are designed for sublingual or buccal absorption, allowing for controlled and extended relief. This formulation provides a convenient alternative for patients who may have difficulty with other dosage forms.

Disclaimer: Illinois Compounding Pharmacy, Inc. is a 503A licensed compounding pharmacy that customizes medications to meet unique patient and prescriber needs. The FDA allows compounding when commercial drugs are in shortage or the patient is required to take a compounded drug because they will benefit from it. Compounding a product because it is cheaper than a commercial product is not allowed. Our pharmacy does not compound copies of commercially available products unless allowed by the FDA (ie FDA shortage list, allergies, palatability, etc.
