DESCRIPTION OF MEDICAL USE

Oxytocin, known as the "love hormone" or "bonding hormone," plays a key role in childbirth, breastfeeding, and intimate interactions, promoting trust and relaxation. Medically, synthetic oxytocin supports reproductive health, emotional well-being, and social bonding. Nasal oxytocin spray or lozenges can enhance milk flow for breastfeeding mothers. It may also aid individuals with sexual dysfunction, low libido, or difficulty with arousal and orgasm. Some studies suggest intranasal oxytocin can improve orgasm intensity and post-sex contentment under medical supervision.

PRESCRIPTIONS

☐ **Oxytocin _____ units /0.1ml Nasal Spray**

Disclaimer: Illinois Compounding Pharmacy, Inc. is a 503A licensed compounding pharmacy that customizes medications to meet unique patient and prescriber needs. The FDA allows compounding when commercial drugs are in shortage or the patient is required to take a compounded drug because they will benefit from it. Compounding a product because it is cheaper than a commercial product is not allowed. Our pharmacy does not compound copies of commercially available products unless allowed by the FDA (ie FDA shortage list, allergies, palatability, etc.
